

HORTON 360™

YOUR VIEW TO THE WORLD AROUND YOU.

The Horton 360 system provides crews with a complete view around the ambulance, enhancing their safety on the road.

At Horton, we protect crews and patients with innovative features like Horton 360 that provides a complete view of the ambulance's surroundings. Horton is the first ambulance manufacturer to offer a 360° camera system, allowing for more effective and safer maneuvering of the ambulance, especially in tight areas.

☐☐ FOUR CAMERAS, ONE VIEW

Four individual cameras make up Horton 360—one mounted in the front grille area, and three mounted high at the rear and sides of the vehicle. These four feeds are then merged into one 360° view that can be displayed on the i4G+™ screen or a separate monitor, based on your preference.

☐☐ INDIVIDUAL VIEWS OF VEHICLE SURROUNDINGS

Each camera in the Horton 360 system can be isolated if there's a specific view your crew needs. Individual views are also triggered along with the turn signals or reverse gear so crews can better see what's on the side or at the rear when maneuvering the ambulance.

☐☐ PATENTED HORTON HOUSING

Each Horton 360 camera is mounted in a patented housing that includes four small LED lights providing customizable emergency lighting. Simultaneously protecting the cameras and lights, this hard plastic casing can be painted to match the ambulance; it is also available in chrome.

KEY ADVANTAGES

360° REAL-TIME VEHICLE VIEW

AUTOMATIC FOCUS WITH TURN AND REVERSE

CUSTOMIZABLE CAMERA HOUSING WITH WARNING LIGHTS

THE HORTON DIFFERENCE

All Horton ambulances come standard with the features you know and trust for strength and safety.
